Consisting of 13 chapters, this book is uniformly written to provide sensible, matter-of-fact methods for understanding and caring for patients with permanent pacemakers, ICDs and CRT systems. Now improved and updated, including a new chapter on programming and optimization of CRT devices, this second edition presents a large amount of information in an easily digestible form. Cardiac Pacing and Defibrillation offers sensible, matter-of-fact methods for understanding and caring for patients, making everyday clinical encounters easier and more productive. Readers will appreciate the knowledge
and experience shared by the authors of this book.

When a jazz hero dies, rumors, speculation, gossip, and legend can muddle the real cause of death. In this book, Frederick J. Spencer conducts an inquest on how jazz greats lived and died pursuing their art. Forensics, medical histories, death certificates, and biographies divulge the way many musical virtuosos really died. An essential reference source, Jazz and Death strives to correct misinformation and set the story straight. Reviewing the medical records of such jazz icons as Scott Joplin, James Reese Europe, Bennie Moten, Tommy Dorsey, Billie Holiday, Charlie Parker, Wardell Gray, and Ronnie Scott, the book spans decades, styles, and causes of death. Divided into disease categories, it covers such illnesses as ALS (Lou Gehrig's Disease), which killed Charlie Mingus, and tuberculosis, which caused the deaths of Chick Webb, Charlie Christian, Bubber Miley, Jimmy Blanton, and Fats Navarro. It notes the significance of dental disease in affecting a musician's embouchure and livelihood, as happened with Joe "King" Oliver. A discussion of Art Tatum's visual impairment leads to discoveries in the pathology of what blinded Lennie Tristano. Heavy drinking, even during Prohibition, was the norm in the clubs of New Orleans and Kansas City and in the ballrooms of Chicago and New York. Too often, the musical scene demanded that those who play jazz be "jazzed." After World War II, as heroin addiction became the hallmark of revolution, talented bebop artists suffered long absences from the bandstand. Many did jail time, and others succumbed to the ravages of "horse." With Jazz and Death, the causes behind the great jazz funerals may no longer be misconstrued. Its clinical and morbidly entertaining approach creates an invaluable compendium for jazz fans and scholars alike. Frederick J. Spencer is a professor and associate dean emeritus of the School of Medicine (Medical College of Virginia) at Virginia Commonwealth University. He has been published in the New England Journal of Medicine, Journal of the American Medical Association, American Journal of Public Health, and Modern Medicine, among other publications.

Learn jazz guitar harmony in a logical, step-by-step way that is always focused on gig-ready applications. Harmony-melody relationship is explored in detail via "hands on" examples that start with simple voicings over common chord changes (ii-V-I, I-vi-ii-V and others) and moves on to comping over well-known jazz standards and blues. The standards are fully notated with beautiful and lush passing chords in the style of the great guitarists. Finally, learn about the basics of jazz harmony.

The most critical and influential relationship affecting one's growth as a mental health professional is the relationship between the clinician and the supervisor. Good supervisors breed good therapists. This book goes beyond facts and figures to provide an innovative perspective on the supervision process. Through contributions by seven supervisees and the supervisor they all shared, readers are offered a rare glimpse into what takes place during the supervision hour. This book not only offers insight into the elements integral to effective supervision, but also teaches about the supervisory relationship. With contributors from various disciplines, theoretical orientations, and cultures, it shows how the supervisee and supervisor are able to navigate these differences while still gaining the most from supervision. Topics that are covered include cultural competence in multicultural supervision and remote supervision when it is conducted between clinicians in different countries, as well as an original study by the authors on the experiences of supervisees during the global Covid-19 pandemic and the transition to remote supervision. For mental health professionals who are training to be supervisors or experienced supervisors looking to improve their skills, this book will serve as an invaluable resource for professional development.
Jazz on the Line: Improvisation in Practice presents an ethnographic reflection on improvisation as performance, examining how musicians think and act when negotiating improvisational frameworks. This multidisciplinary discussion—guided by a focus on recordings, composition, authenticity, and venues—explores the musical choices made by performers, emphasizing how these choices can be logically understood within the context of controlled, musical outputs. Throughout the text, the author engages directly with musicians and their varied practices—from canonized dogmas to innovative experimentalism—offering interviews both planned and spontaneous. Musical agency is posited as a tightrope balancing act, signifying the skill and excitement of improvisational performativity and exemplifying the life of a jazzaerialist. With a travel journal approach as a backdrop, Jazz on the Line provides concepts and theories that demystify the creative processes of improvisation.

Evidence suggests a direct correlation between the quality of postoperative orthopaedic rehabilitation and the effectiveness of the surgery. Clinical Orthopaedic Rehabilitation, 4th Edition, helps today’s orthopaedic teams apply the most effective, evidence-based protocols for maximizing return to function following common sports injuries and post-surgical conditions. Charles Giangarra, MD and Robert Manske, PT continue the commitment to excellence established by Dr. S. Brent Brotzman in previous editions, bringing a fresh perspective to the team approach to rehabilitation. Every section is written by a combination of surgeons, physical therapists, and occupational therapists, making this respected text a truly practical "how-to" guide for the appropriate initial exam, differential diagnosis, treatment, and rehabilitation. Treatment and rehabilitation protocols are presented in a step-by-step, algorithmic format with each new phase begun after criteria are met (criteria-based progression, reflecting current best practice). Revised content brings you up to date with new evidence-based literature on examination techniques, classification systems, differential diagnosis, treatment options, and criteria-based rehabilitation protocols. Extensive updates throughout include new chapters on: medial patellofemoral ligament, shoulder impingement, pec major ruptures, thoracic outlet syndrome, general humeral fractures, foot and ankle fractures, medial patellofemoral ligament reconstruction, the arthritic hip, athletic pubalgia, and labral repair and reconstruction.
