Beyond Fundamentals.
Creating Better Compositions by Design

The path to better painting begins with mastering composition. This effective guide blends clear, visual instruction with five step-by-step demonstrations to show you how to plan and paint your best work yet. Composition is the key, and here you’ll learn to design paintings with new skill and confidence. It all begins with the armature or structure of the picture plane. Every great painting has one, and you’ll see through several famous examples exactly how the Old Masters used armatures to create movement, narrative, harmony, and fluidity. Based on these examples, you’ll practice what you’ve learned following a series of hands-on demonstrations. Once you understand the basic principles of design, you’ll be amazed at how quickly and effectively your compositions come together. Soon you will be painting more boldly and confidently than ever before with less reworking and overworking. Whether you’re a beginner looking for basic instruction or a more advanced painter troubleshooting a specific problem, the proven methods in this book will work for you. Ideal for all mediums, Mastering Composition gives you the knowledge you need to create powerful paintings out of every subject.

From New York Times best-selling author of the Dinotopia series, James Gurney, comes a carefully crafted and researched study on color and light in paintings. This art instruction book will accompany the acclaimed Imaginative Realism: How to Paint What Doesn’t Exist. James Gurney, New York Times best-selling author and artist of the Dinotopia series, follows Imaginative Realism with his second art-instruction book, Color and Light: A Guide for the Realist Painter. A researched study on two of art’s most fundamental themes, Color and Light bridges the gap between abstract theory and practical knowledge. Beginning with a survey of underappreciated masters who perfected the use of color and light, the book examines how light reveals form, the properties of color and pigments, and the wide variety of atmospheric effects. Gurney cuts through the confusing and contradictory dogma about color, testing it in the light of science and observation. A glossary, pigment index, and bibliography complete what will ultimately become an indispensable tool for any artist. This book is the second in a series based on his blog, gurneyjourney.com. His first in the series, Imaginative Realism, was widely acclaimed in the fantastical art world, and was ranked the #1 Bestseller on the Amazon list for art instruction. “James Gurney’s new book, Color and Light, cleverly bridges the gap between artistic observation and scientific explanation. Not only does he eloquently describe all the effects of color and light an artist might encounter, but he thrills us with his striking paintings in the process.” – Armand Cabrera, Artist

The world's best creature designers and concept artists provide a groundbreaking and unique insight into their creative processes and practices.
Richard Yot, known for his work in film as a lighting artist and stylised 3D illustrations, takes you through the fundamental properties of natural and artificial light, shadows, the interaction of light on different types of surfaces, reflections, as well as transparency, translucency and the effects of light on colour. Richard also explores how to observe the effects of light to create realistic images, and the creative use of light in composition and design for creating moods or setting a scene. This second edition has been updated with revised photos and artwork, as well as 15 practical exercises and new online video material. Packed with diagrams and illustrations, as well as computer game and film stills, Light for Visual Artists is an invaluable resource for animators, digital illustrators, painters, photographers and artists working in any medium.
