Ford has announced that its new electric Mustang Mach-E GT is available to order now, priced from £67,725. The Mustang Mach-E arrived in showrooms earlier this year as the brand's first standalone EV.

The new electric Mustang Mach-E GT is the most powerful and highest-performance Mustang ever, with up to 513 horsepower and 510 lb.-ft. of torque. It features an EPA-estimated 308 miles of range on a single charge, and it can go from 0 to 60 mph in just 3.7 seconds.

The Mustang Mach-E GT's performance is matched by its design, with a sleek, aerodynamic body that is 89 percent unique to the Mach-E GT. The car's exterior features a roof-mounted solar panel, which can help extend battery life and reduce the carbon footprint of the vehicle.

Inside, the Mustang Mach-E GT is as advanced as it is stylish. The car's interior includes a 15.5-inch touchscreen display, which is the largest in the industry, and is used for everything from navigation to entertainment. The car also features a 12.3-inch digital instrument cluster, which can be personalized to show the driver's preferred information.

The Mustang Mach-E GT is available with a choice of three battery configurations, with a range of 230 miles, 305 miles, or 370 miles. The car also features a 155-kilowatt fast charging capability, which can add 80 percent of the car's battery life in 38 minutes.

Fords announcement comes as electric vehicles continue to gain popularity, with growing concerns about climate change and the need for more sustainable transportation solutions. The Mustang Mach-E GT is likely to appeal to those who want a high-performance vehicle that is also environmentally friendly.
