"Computer Lib/Dream Machines" is a 1974 book by Ted Nelson, printed in a two-front-cover paperback to indicate its "interwingled" nature. Originally self-published by Nelson, it was reissued with a foreword by Stewart Brand in 1987 by Microsoft Press. It is a foundational work on the theory of hypertext. It predates the World Wide Web by over a decade. The book is considered by many to be a seminal work on the theory of hypertext, and is considered by many to be a seminal work on the history of computing.

In 1973, Nelson coined the term "hypertext" for his interlinked text concept. The term was originally chosen because it was a combination of the words "hypothesis" and "text", and because Nelson believed that hypertext would be a "hypothesis" for the future of computing. The book is considered by many to be a seminal work on the history of computing.
