Jeremy Clarkson puts the pedal to the floor in Don't Stop Me Now; a collection of his Sunday Times motoring journalism. There's more to life than cars. Jeremy Clarkson knows this. There is, after all, a whole world out there just waiting to be discovered. So, before he gets on to torque steer and active suspension, he takes time out to consider: • The madness of Galapagos tortoises • The similarities between Jeremy Paxman and AC/DC's bass guitarist • The problems and perils of being English • God's dumbest creation Then there are the cars: whether it's the poxiest little runabout or an exotic, firebreathing supercar, no one does cars like Clarkson. Unmoved by mechanics' claims and unimpressed by press junkets, he approaches anything on four wheels without fear or favour. What emerges from the ashes is rarely pretty. But always very, very funny. Praise for Jeremy Clarkson: 'Brilliant . . . laugh-out-loud' Daily Telegraph 'Outrageously funny . . . will have you in stitches' Time Out Number-one bestseller Jeremy Clarkson writes on cars, current affairs and anything else that annoys him in his sharp and funny collections. All organizations must cope with future uncertainties. These uncertainties affect the strategic choices they make. They must commit scarce organizational resources to future outcomes which they have little assurance will come into being. Marcus explores how decision makers in the energy industry made choices in the face of such uncertainties, specifically examining two major uncertainties they confronted in the 2012-2018 period – price volatility and climate change. Marcus tells the story of how different companies in the integrated oil and natural gas sector and in the motor vehicle sector responded to these uncertainties. In the face of these challenges, companies in the energy industry hedged their bets by staking out paradoxical or contrasting positions. On the one hand, they focused on capturing as much gain as they could from the world's current dependence on fossil fuels and on the other hand they made preparations for a future in which fossil fuels might not be the world's dominant energy source.

This book was born from curiosity. To begin with, it was the curiosity of an economist who studied in the 60’s in an environment which has subsequently developed from national into global economics. Who has to recognize that politicians, scholars and large segments of society oblivious to supranational authorities and economic globalization forces continue to labour under the notion that they are still fully autonomous and sovereign when shaping national economic policy. And pretend as though their own national state were still the "master in its own house" that despite unbridled market economics could continue to dictate to the economy and companies how to live and in which "rooms". All that has become fiction. The laws of globalization diminish the manoeuvring space for shaping national economic policy. Even if many folks today don’t want to hear it: The issue is no longer achieving what is socially politically desirable for the own society but rather the optimal adaptation of society and social benefits to the politically practicable.
