This book is an ethical critique of existing approaches to sustainable development and international environmental cooperation, providing a detailed and structured account of the tensions, normative shifts and contradictions that currently characterize it. With specific focus on three environmental regimes, the volume explores the way various notions of justice feature both implicitly and explicitly in the design of global environmental policies. In so doing, the dominant conceptions of justice that underpin key global environmental policies are identified and criticised on the basis of their compatibility with the normative essence of global sustainable development. Global Justice and Neoliberal Environmental Governance demonstrates that whilst moral norms inflict far greater impact in regime development than is currently acknowledged by orthodox approaches to regime analysis, the core polices remain rooted in two neo-liberal interpretations of justice which undermine the ability to achieve sustainable development and international justice. It will appeal to students and scholars of politics, philosophy, international relations, geography and law.

In recognising the significant role law, especially international law, can play in supporting the objectives of global justice and sustainable development, this edited collection provides a wide-ranging analysis of some of the most fundamental challenges facing global society.

Sustainable Development, International Criminal Justice, and Treaty Implementation provides a serious and timely perspective on the relationship between two important and dynamic fields of international law. Comprising chapters written by leading academics and international lawyers, this book examines how the principles and practices of international criminal law and sustainable development can contribute to one another's elaboration, interpretation and implementation. Chapters in the book discuss the potential and limitations of international criminalization as a means for protecting the basic foundations of sustainable development; the role of existing international crimes in penalizing serious forms of economic, social, environmental and cultural harm; the indirect linkages that have developed between sustainable development and various mechanisms of criminal accountability and redress; and innovative proposals to broaden the scope of international criminal justice. With its rigorous and innovative arguments, this book forms a unique and urgent contribution to current debates on the future of global justice and sustainability.

Despite the global endorsement of the Sustainable Development Goals, environmental justice struggles are growing all over the world. These struggles are not isolated injustices, but symptoms of interlocking forms of oppression that privilege the few while inflicting misery on the many and threatening ecological collapse. This handbook offers critical perspectives on the multi-dimensional, intersectional nature of environmental injustice and the cross-cutting forms of oppression that unite and divide these struggles, including gender, race, poverty, and indigeneity. The work sheds new light on the often-neglected social dimension of sustainability and its relationship to human rights and environmental justice. Using a variety of legal frameworks and case studies from around the world, this volume illustrates the importance of
overcoming the fragmentation of these legal frameworks and social movements in order to develop holistic solutions that promote justice and protect the planet's ecosystems at a time of intensifying economic and ecological crisis.

Analysing and synthesising vast data sets from a multitude of disciplines including climate science, economics, hydrology and agricultural research, this volume seeks new methods of combining climate change mitigation, adaptation, development, and poverty reduction in ways that are effective, efficient and equitable. A guiding principle of the project is that new alliances of state and non-state sector partners are urgently required to establish cooperative responses to the threats posed by climate change. This volume offers a vital policy framework for linking our response to this change with progressive principles of global justice and sustainable development.

This volume analyses key theoretical, institutional and legal aspects of intergenerational equity and justice in multi-level sustainable development treaty implementation.

The need to reassess the discourse of sustainable development in terms of equity and justice has grown rapidly in the last decade. This book explores renewed and distinctive approaches to the sustainability and justice debate, integrating a range of perspectives that include moral philosophy, sociology and law. By bringing together young and senior scholars from the field of global environmental law and governance from around the world, this work is divided into three sections, covering sustainable development and justice, sustainable development in context, and sustainable development and judiciaries. This book will appeal to academics, law practitioners and policy-makers interested in shaping future socio-legal research on global environmental law and governance.

Justice and democracy can be mutually reinforcing in global governance, a domain where both are currently lacking.

This two-volume Encyclopedia of Global Justice, published by Springer, along with Springer's book series, Studies in Global Justice, is a major publication venture toward a comprehensive coverage of this timely topic. The Encyclopedia is an international, interdisciplinary, and collaborative project, spanning all the relevant areas of scholarship related to issues of global justice, and edited and advised by leading scholars from around the world. The wide-ranging entries present the latest ideas on this complex subject by authors who are at the cutting edge of inquiry. The Encyclopedia sets the tone and direction of this increasingly important area of scholarship for years to come. The entries number around 500 and consist of essays of 300 to 5000 words. The inclusion and length of entries are based on their significance to the topic of global justice, regardless of their importance in other areas.

In 1992 world leaders met at the Earth Summit in Rio de Janeiro to reaffirm the Declaration of the United Nations Conference on the Human Environment that was established on June 16, 1972 in Stockholm. The meeting resulted in the adoption of Agenda 21 by the member states which is a framework for the transition to a more sustainable world. In 2012 the members gathered to assess and reaffirm the importance of progress towards the efforts of Agenda 21. In response to this the Institute of Medicine's (IOM's) Roundtable on Environmental Health Sciences, Research, and Medicine held a workshop to inform the policies that are discussed at the 2012 Earth Summit. The workshop, held in Woods Hole, Massachusetts on July 25-26, 2011, focused on the issue of sustainability and health as well as the linkages that are currently present between the two. The workshop included presentations and discussions which are summarized in Public Health Linkages with Sustainability: Workshop Summary. The report presents how different areas of public health, such as food and water resources, link to sustainability and opportunities or venues that can be examined.
