This book provides an overview of the research related to psychological assessment across South Africa. The thirty-six chapters provide a combination of psychometric theory and practical assessment applications in order to combine the currently disparate research that has been conducted locally in this field. Existing South African texts on psychological assessment are predominantly academic textbooks that explain psychometric theory and provide brief descriptions of a few testing instruments. Psychological Assessment in South Africa provides in-depth
coverage of a range of areas within the broad field of psychological assessment, including research conducted with various psychological instruments. The chapters critically interrogate the current Eurocentric and Western cultural hegemonic practices that dominate the field of psychological assessment. The book therefore has the potential to function both as an academic text for graduate students, as well as a specialist resource for professionals, including psychologists, psychometrists, remedial teachers and human resource practitioners.

Volume 2, Measurement and Assessment of The Wiley Encyclopedia of Personality and Individual Differences The Encyclopedia of Personality and Individual Differences (EPID) is organized into four volumes that look at the many likenesses and differences between individuals. Each of these four volumes focuses on a major content area in the study of personality psychology and individuals' differences. The first volume, Models and Theories, surveys the significant classic and contemporary viewpoints, perspectives, models, and theoretical approaches to the study of personality and individuals' differences (PID). The second volume on Measurement and Assessment examines key classic and modern methods and techniques of assessment in the study of PID. Volume III, titled Personality Processes and Individuals Differences, covers the important traditional and current dimensions, constructs, and traits in the study of PID. The final volume discusses three major categories: clinical contributions, applied research, and cross-cultural considerations, and touches on topics such as culture and identity, multicultural
identities, cross-cultural examinations of trait structures and personality processes, and more. Each volume contains approximately 100 entries on personality and individual differences written by a diverse international panel of leading psychologists. Covers significant classic and contemporary personality psychology models and theories, measurement and assessment techniques, personality processes and individuals differences, and research. Provides a comprehensive and in-depth overview of the field of personality psychology. The Encyclopedia of Personality and Individual Differences is an important resource for all psychology students and professionals engaging in the study and research of personality.

Intellectual styles are individuals' preferred ways of using their abilities. This book provides the first comprehensive and systematic review of existing research on the value and desirability of different intellectual styles. By critically analyzing findings from hundreds of international studies undertaken over eight decades, Li-fang Zhang demonstrates that the creativity-generating Type I styles are generally superior to the norm-conforming Type II styles in relation to a wide range of learning processes and developmental outcomes, work performance, physical and mental health, and many other domains of people's lives. She further
demonstrates that people explicitly and implicitly express their preference for Type I styles over Type II styles. Professor Zhang elucidates the practical value of cultivating diverse intellectual styles, especially Type I styles, in both academic and nonacademic settings, and lays the groundwork for future research to advance the field of intellectual styles and to inform scholarly work in other academic disciplines.

The Second Edition of Foundations of Psychological Testing: A Practical Approach is a scholarly, yet pragmatic and easy to understand text for undergraduate students new to the field of psychological testing. Using an engaging, conversational format, authors Sandra A. McIntire and Leslie A. Miller aim to prepare students to be informed consumers—as test users or test takers—not to teach students to administer or interpret individual psychological tests.
