This book works as a guide to videoconferencing practice for psychological providers through a broad, simplified, and practical overview of pertinent factors. It is a consolidation of research literature and practice wisdom that assists providers in adapting to the increasingly common practice through videoconferencing. The book begins by reviewing the etiology of the increasing prevalence of telehealth services and the role of telehealth in addressing ongoing mental health disparities. An overview of existing videoconferencing practices, guidebooks and general recommendations, as well as specifics of ethical and legal issues are included. The author emphasizes the importance of screening for all videoconferencing practice sessions, as it serves as a safeguard for both the provider and the patient. Some guidance on using those instruments in context will help them to use those tools more effectively. Finally, primary care providers and even some adult psychiatrists and psychologists, early career child psychiatrists, social workers, nurses, school counselors, and all clinical professionals who may encounter children struggling with psychiatric disorders.

In pediatrics, early onset mental health conditions, including Attention Deficit Hyperactivity Disorder, are consistently among the most common chronic conditions in pediatric clinical populations. Delays in both diagnosis and treatment increase the morbidity associated with these conditions. These delays expose the child to negative ramifications of his/her illness and can impact rates of poor academic performance, substance use disorders and criminal justice system involvement – potentially impacting long-term life trajectories. Early identification of mental illness and appropriate intervention is critical to the healthy development of youth, though physicians in primary care and pediatrics are seldom trained to detect and treat such illnesses. The importance of recognizing mental illness is reflected in practice guidelines for pediatric primary care providers as well as in how service delivery is being structured, but this does not offer in-depth clinical guidelines. Additionally, integrated care and medical home models include mental health as key components, though yet again physicians are often not trained to work with these models. While clearly indicated clinically, these requirements do not come with in-depth clinical guidelines.

This book is designed to assist providers in adapting to the increasingly common practice through videoconferencing. It is a consolidation of research literature and practice wisdom that assists providers in adapting to the increasingly common practice through videoconferencing. outlined here. To keep pace, this revised text is a must for primary care clinicians and administrators. It is also essential reading for graduate classes in a variety of disciplines, including social work, psychology, and medicine. This updated edition includes:

- A refined presentation of the Primary Care Behavioral Health (PCBH) model
- The latest terms, trends and innovations in primary care
- Comprehensive strategies and resource lists for hiring and training new Behavioral Health Consultants (BHC)
- Step-by-step guidance for implementing the PCBH model
- A plethora of evolved practice tools, including new Core Competency Tools for BHCs and primary care providers
- Sample interventions for behaviorally influenced problems
- The use of "Third Wave" behavior therapies in primary care
- Detailed program evaluation instructions and tools
- The latest on financing integrated care
- An entire chapter on understanding and addressing the prescription drug abuse epidemic
- Experienced guidance on ethical issues in the PCBH model

With all of the changes in health care, the potential for the Primary Care Behavioral Health (PCBH) model to improve primary care—and the health of the population—is greater than ever. This book should be the first read for anyone interested in realizing the potential of integration.
