Align Technology is a global medical device company that is changing lives through better smiles. We reimagine and reinvent the way orthodontic and restorative treatment is presented and delivered to millions of people around the world through our network of Invisalign-trained doctors.
This book offers both marketing and sales professionals a rare combined insight into both worlds to continuously capture customer intelligence and create value, by blending detailed research with academic rigor and commercial experience of the authors in both Europe and North America. It has never been easier to produce great marketing content and sales collateral. And yet, 90% of the content that marketing produces is NEVER used by sales. Why not? Because it’s not relevant to the audience or the prospect doesn’t even know the content exists. Furthermore 58% of deals end up in “no decision” because Sales has not presented value effectively. Companies are creating lots of noise but failing to resonate with the customers. So what? The danger, aside from marketing wasting tens of millions of dollars on
ineffective content and tools, is that customers will disengage. 94% of prospects say they have completely disengaged with vendors because of irrelevant content. In order to grow fast, the authors argue, Sales and Marketing teams need to slow down. They need to work together to truly understand their customers’ needs, wants, motivations and pain points so that they can offer customized “value”. The book sets out how to establish a formal program to continuously capture customer intelligence and insights – the shiny gems of understanding that help prospects to connect the dots – so that value can be consistently articulated in marketing and sales conversations. By integrating the best ideas and practice from commercial experience and academic research the authors show how to create value across the entire marketing and sales value
chain— not only get a new customer, but to continue to create value for future purchases by creating “post-sales” value.

When it comes to buying a mobile phone, choosing a university, selecting a software system, or making any other purchase in a crowded marketplace, many consumers feel they are faced with a 'sea of sameness'. The websites and social media streams of the various companies all seem to blur into one, with the same phrases and promises repeated over and over again. Stand-out Marketing presents original research which compares the content produced by over 30 organizations in leading sectors to quantify this effect, proving not only that the 'sea of sameness' exists, but documenting its precise size and nature. On the back of this unique and
fascinating research, Stand-out Marketing traces the problem back to its roots and offers a proven, seven-step framework to help companies rise above it and differentiate themselves from the competition. By re-focusing on the customer and their needs, and re-shaping the capabilities, attitudes and behaviours of the organization accordingly, the framework will help companies stand out and deliver genuine value. Over time, this value will convert to growth and profits for any business.

Value Creation and its effects on Transfer Pricing and tax law Emerging from the OECD/G20 BEPS Project, a new, somewhat fuzzy notion of Value Creation came to permeate not only Transfer Pricing language but also wider allocation
rules and anti-abuse provisions in international tax law. The notion of ‘Value Creation’ reframes the interpretation and application of the Arm’s Length Principle (ALP) that is embedded in Articles 7 and 9 of the OECD Model Convention. This new Value Creation notion and approach assist in understanding key enterprise functions while different industry sectors manifest these concepts in various ways. Situating such notions and this approach within the law of tax treaties and analyzing terms of the OECD Transfer Pricing Guidelines alongside their factual context is the aim of this book. Here, law students address Transfer Pricing and Value Creation in sectors as varied as commodities trade, automotive, consumer products, food and beverages, pharmaceutical and life sciences, telecommunications, and
the key topic of value creation in a digitalized economy. Our LL.M. students were required to address issues not explored in legal research and to discuss factual topics relevant for Transfer Pricing. All students focused on topics that are new to the international tax debate that keep evolving and on factual matters that often escape legal research.

In recent years, developing a value proposition has become a prime consideration for businesses. A value proposition is an analysis and quantified review of the business benefits, costs and value that a company can deliver to prospective customers and customer segments. Creating and Delivering your Value Proposition provides guidance for business leaders - demonstrating why having a strong value
proposition is so important for a company. This practical new title shows readers how to build, deliver and harness value propositions to create profitable growth for a business, by utilizing the experience of clients and customers. Featuring global case studies and examples, Creating and Delivering your Value Proposition is an essential guide to understanding and developing a value-focused strategy for all senior practitioners.

This book offers broad evidence on how new information and communication technologies (ICT) impact social development and contribute to social welfare. Its aim is to show how new technological solutions may contribute to society’s welfare by encouraging new ‘socially responsible’ initiatives and...
practices as the broad adoption of new technologies becomes an integral component of organizations, and of the overall economy. Society and Technology: Opportunities and Challenges is designed to provide deep insight into theoretical and empirical evidence on ICT as socially responsible technologies. More specifically, it puts special focus on examining the following: how channels of ICT impact on social progress, environmental sustainability and instability the role of ICT in creating social networks, with positive and negative consequences of networking how ICT encourages education, skills development, institutional development, etc the ethical aspects of technological progress, and technology management for social corporate responsibility. The book is written primarily for scholars and academic professionals from
a wide variety of disciplines that are addressing issues of economic development and growth, social development, and the role of technology progress in broadly defined socio-economic progress. It is also an invaluable source of knowledge for graduate and postgraduate students, particularly within economic and social development, information and technology, worldwide studies, social policy or comparative economics.

In the wake of the profound upheavals that our society has been facing, the business world is undergoing change. Values such as trust, well-being, sustainability, and respect for human beings and their deeper ambitions are becoming increasingly important. Corporations and professionals can
achieve and maintain success only if they can bring their relationship with their customers to a new, higher level. The condition that links the two is very similar to that created when we fall in love. The organizational models and marketing approaches based on the metaphor of war, and the inherent rhetoric of "command and control", are no longer valid; to form such a bond we need love. The authors are aware of this. Since 2013, in collaboration with international scholars, they have been studying the new market dynamics and the fundamental role of ethics in gaining commercial results. While their previous book Sales Ethics (2015) helped to set up and manage customer relationships based on trust and fairness, this new book will support you in building your business strategy and designing marketing tools (from
customer analysis, to the definition of your offer and the style of communication, up to the positioning of prices and the management of resources) in the light of a new model, the Loving Business Model, which aims to make the customer fall in love with you, and you with your work. This book, like its predecessor, is the result of independent research conducted between Italy and the United States combined with the authors’ many years of professional experience. It contains the most up-to-date and effective techniques available in the modern marketing landscape, supported by case studies, concrete examples and activities, which will guide you to put your newly acquired knowledge into practice.

A Step-by-Step Guide to Showing the Value of Soft Skill
As organizations rise to meet the challenges of technological innovation, globalization, changing customer needs and perspectives, demographic shifts, and new work arrangements, their mastery of soft skills will likely be the defining difference between thriving and merely surviving. Yet few executives champion the expenditure of resources to develop these critical skills. Why is that and what can be done to change this thinking? For years, managers convinced executives that soft skills could not be measured and that the value of these programs should be taken on faith. Executives no longer buy that argument but demand the same financial impact and accountability from these functions as they do from all other areas of the organization. In Proving the Value of Soft Skills, measurement and evaluation experts Patti
Phillips, Jack Phillips, and Rebecca Ray contend that efforts can and should be made to demonstrate the effect of soft skills. They also claim that a proven methodology exists to help practitioners articulate those effects so that stakeholders’ hearts and minds are shifted toward securing support for future efforts. This book reveals how to use the ROI Methodology to clearly show the impact and ROI of soft skills programs. The authors guide readers through an easy-to-apply process that includes: • business alignment • design evaluation • data collection • isolation of the program effects • cost capture • ROI calculations • results communication. Use this book to align your programs with organizational strategy, justify or enhance budgets, and build productive business partnerships. Included are job aids, sample plans,
What's the secret to being indispensable—a true go-to person—in today's workplace? With new technology, constant change and uncertainty, and far-flung virtual teams, getting things done at work is tougher and more complex than ever. We’re in the midst of a collaboration revolution, working with everyone, all the time, across silos and platforms. But sometimes it feels like we're stuck in a no-win cycle—dealing with an overwhelming influx of asks, with unclear lines of communication and authority. Overcommitment syndrome looms larger than ever before. But even amid the seeming chaos, there's always that indispensable go-to person who thrives on their many working relationships with people all
over the organization chart. How do they do it? Go-to people consistently make themselves valuable to others, maintain a positive attitude of service, are creative and tenacious, and take personal responsibility for getting the right things done. In this game-changing yet practical book, talent guru and bestselling author Bruce Tulgan reveals the secrets of the go-to person in our new world of work. Based on an intensive study of people at all levels, in all kinds of organizations, Tulgan shows how go-to people think and behave differently, building up their influence with others—not by trying to do everything for everybody but by doing the right things at the right times for the right reasons, regardless of whether they have the formal authority. This book will teach you to: Understand the peculiar mathematics of real influence Lead
from wherever you are up, down, sideways, and diagonal. Know when to say "no" or "not yet," and how to say "yes." Keep getting better and better at working together. And much more. The Art of Being Indispensable at Work is the new How to Win Friends and Influence People for an era in which the guardrails of traditional management have been pulled away.

Doing well with money isn’t necessarily about what you know. It’s about how you behave. And behavior is hard to teach, even to really smart people. Money—investing, personal finance, and business decisions—is typically taught as a math-based field, where data and formulas tell us exactly what to do. But in the real world people don’t make financial
decisions on a spreadsheet. They make them at the dinner table, or in a meeting room, where personal history, your own unique view of the world, ego, pride, marketing, and odd incentives are scrambled together. In The Psychology of Money, award-winning author Morgan Housel shares 19 short stories exploring the strange ways people think about money and teaches you how to make better sense of one of life’s most important topics.

The biggest hurdle for junior scholars looking to embark on an academic career is to make the transition from PhD candidate to that first (ideally tenured) job. An imperative part of this process is getting published and yet - increasingly - this is becoming something harder to achieve.
