The Zetas are a humanoid extraterrestrial civilization, responsible for a lot of the ...

"""The beings on Zeta Reticuli are the future selves -- granted, several million years into the future -- of the beings on Earth right now. On the soul line, this has to do with your evolution to become more, to be more established benevolently on a creative level. By the time your souls become those Zeta Reticulian beings several million years into the future, you will be able to interact with all life in the most benevolent way while being strongly intellectual and scientific. """"In this way, your
science will have a complete balance with heart and soul. This is one of the greatest aspects of significance between you and the Zeta Reticulian beings as of this time. So to them you are their past lives -- that's why they're so fascinated with you -- but for you, when you interact with these beings, you are truly meeting, in many senses, your future." -- Zoosh through Robert Shapiro

They do not look identical, but there are similarities. When you travel, you will note that, but when you return, you will always be happy to be home. Welcome to the universe" -- Joopah through Robert Shapiro

Los Zetas represent a new generation of ruthless, sadistic pragmatists in Mexico and Central America who are impelling a tectonic shift among drug trafficking organizations in the Americas. Mexico's marines have taken down the cartel's top leaders; nevertheless, these capos and their desperados have forever altered how criminal business is conducted in the Western Hemisphere. This narrative brings an unprecedented level of detail in describing how Los Zetas became Mexico's most diabolical criminal organization before suffering severe losses. In their heyday, Los Zetas controlled networks of American police, politicians, judges, and businessmen. The Mexican government is losing its "war on drugs," despite the military, technical, and intelligence resources provided by its northern neighbor. Subcontracted street gangs operate in hundreds of US cities, purchasing weapons, delivering product, executing targeted foes, and bribing the US Border Patrol. Despite crippling losses Los Zetas still dominate Nuevo Laredo, the major portal for legal and illegal bilateral commerce. They also work hand-in-glove with the underworld in Guatemala, El Salvador, and Honduras, as well as with gangs like the Maras Salvatruchas.

A new and dangerous dynamic has been introduced into the Mexican internal security environment. That new dynamic involves the migration of power from traditional state and nonstate adversaries to nontraditional nonstate private military organizations such as the Zetas, enforcer gangs like the Aztecas, Negros, and Polones, and paramilitary triggermen. Moreover, the actions of these irregular
nonstate actors tend to be more political-psychological than military, and further move the threat from hard power to soft power solutions. In this connection, we examine the macro “what, why, who, how, and so what?” questions concerning the resultant type of conflict that has been and is being fought in Mexico. A useful way to organize these questions is to adopt a matrix approach. The matrix may be viewed as having four sets of elements: (1) The Contextual Setting, (the “what?” and beginning “why” questions); (2) The Protagonist's Background, Organization, Operations, Motives, and Linkages (the fundamental "who? why?" and "how" questions); (3) The Strategic-Level Outcomes and Consequences (the basic "so what?" question; and (4) Recommendations that address the salient implications. These various elements are mutually influencing and constitute the political strategic level cause and effect dynamics of a given case. The Contextual Setting explains that the irregular conflict phenomenon in Mexico is a response to historical socio-political factors, as well as new political military dynamics being introduced into the internal security arena. New and fundamental change began to emerge in the 1980s. Mexico began to devolve from a strong, centralized, de facto unitary state that had the procedural features of democracy, but in which the ruling elites faced no scrutiny or accountability. At the same time, Mexico started to become a market state that responded to markets and profits rather than traditional government regulation. In that connection, we see the evolution of new private, nonstate, nontraditional war-making entities (the Zetas, and others) capable of challenging the stability, security, and effective sovereignty of the nation-state. Thus, we see the erosion of democracy and the erosion of the state. In these terms, the internal security situation in Mexico is well beyond a simple law enforcement problem. It is also a socio-political problem, and a national security issue with implications beyond Mexico's borders. The Protagonist's Background focuses on orientation and motivation. In this context, the Zeta is credited with the capability to sooner or later take control of the Gulf Cartel and expand operations into the territories of other cartels-and further challenge the sovereignty of the Mexican state. This cautionary tale of significant criminal military challenge to effective sovereignty and traditional Mexican values takes us to the problem of response. The power to deal effectively with these kinds of threats is not hard military fire power or even more benign police power. Rather, an adequate response requires a "whole-of-government" approach that can apply the full human and physical resources of a nation and its international partners to achieve the individual and collective security and well-being that leads to societal peace and justice. This kind of conflict uses not only coercive military force, but also co-optive and coercive political and psychological persuasion. Combatants tend to be interspersed among ordinary people and have no permanent locations and no identity to differentiate them clearly from the rest of a given population. There is no secluded battlefield far away from population centers upon which armies can engage-armed engagements may take place anywhere.

Our energy centers, or chakras, play an important role in our physical, emotional, mental and spiritual health. Through this little workbook, learn the locations, colors and functions of each of our seven physical chakras and how to balance them with several basic techniques. Great for the entire family.

Zeta functions have been a powerful tool in mathematics over the last two centuries. This book considers a new class of non-commutative zeta functions which encode the structure of the subgroup lattice in infinite groups. The book explores the analytic
behaviour of these functions together with an investigation of functional equations. Many important examples of zeta functions are calculated and recorded providing an important data base of explicit examples and methods for calculation.

Superb high-level study of one of the most influential classics in mathematics examines landmark 1859 publication entitled “On the Number of Primes Less Than a Given Magnitude,” and traces developments in theory inspired by it. Topics include Riemann's main formula, the prime number theorem, the Riemann-Siegel formula, large-scale computations, Fourier analysis, and other related topics. English translation of Riemann's original document appears in the Appendix.

Zeta-function regularization is a powerful method in perturbation theory, and this book is a comprehensive guide for the student of this subject. Everything is explained in detail, in particular the mathematical difficulties and tricky points, and several applications are given to show how the procedure works in practice, for example in the Casimir effect, gravity and string theory, high-temperature phase transition, topological symmetry breaking, and non-commutative spacetime. The formulae, some of which are new, can be directly applied in creating physically meaningful, accurate numerical calculations. The book acts both as a basic introduction and a collection of exercises for those who want to apply this regularization procedure in practice. Thoroughly revised, updated and expanded, this new edition includes novel, explicit formulas on the general quadratic, the Chowla-Selberg series case, an interplay with the Hadamard calculus, and also features a fresh chapter on recent cosmological applications, including the calculation of the vacuum energy fluctuations at large scale in braneworld and other models.
